Missing Validation of Login -0.1

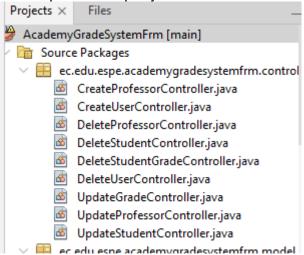

```
private void pwdLoginMousePressed(java.awt.event.MouseEvent evt)
            // TODO add your handling code here:
            if (String.valueOf(pwdLogin.getPassword()).equals("******")) {
                 pwdLogin.setText("");
                 pwdLogin.setForeground(Color.black);
           if (txtUserName.getText().isEmpty()) {
                 txtUserName.setText("Ingrese su nombre de usuario");
                 txtUserName.setForeground(Color.gray);

Inconsistent language (-0.1)

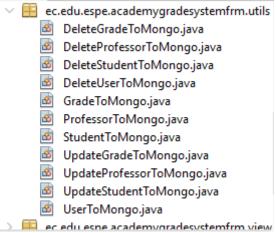

HOME PROFESOR ESTUDIANTE NOTAS REPORTE AYUDA

c) ins 3

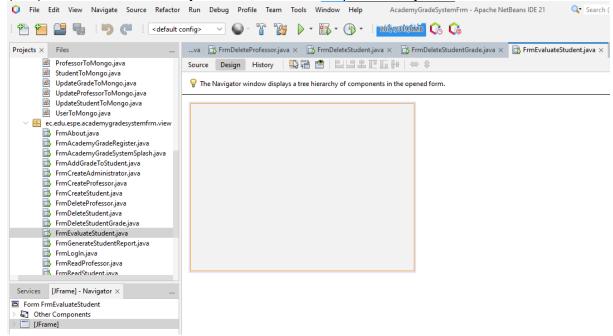

(- 0.1) Too many classes, a professor class could be implemented with all the methods that he performs equally with the student and the grade

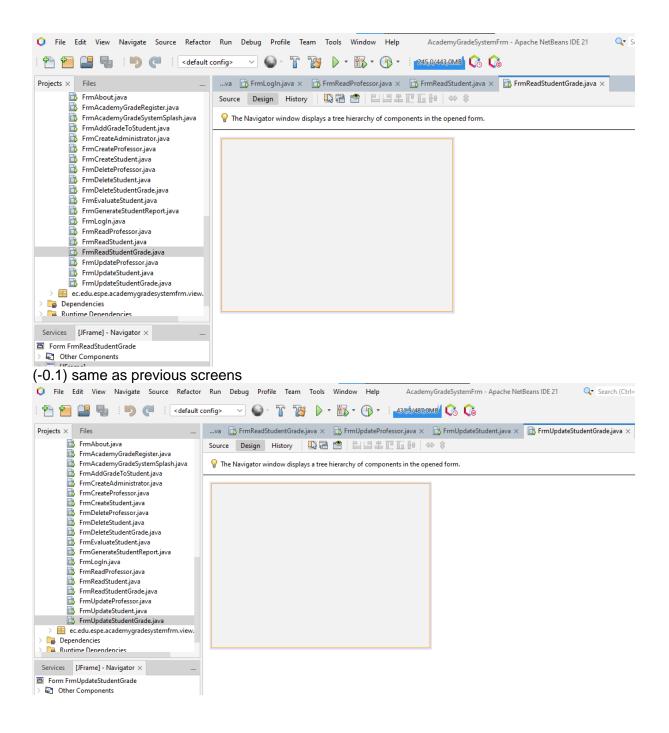

(-0.1) They could implement a generic class to upload the data to the cloud, since this would not be consistent with the Single Responsibility Principle (SRP).

(-0.1) In this JFrame it is only created, but does not perform any action within the code

(-0.1) In this JFrame the same thing is done as the previous one, it is created, but it is not used to perform any action within the code.

- 9. Execution/Functionality/validation&Verification
- a. 10 functionalities 7/10 (1 every function is 1 point: controller and in the design, UI) 11:

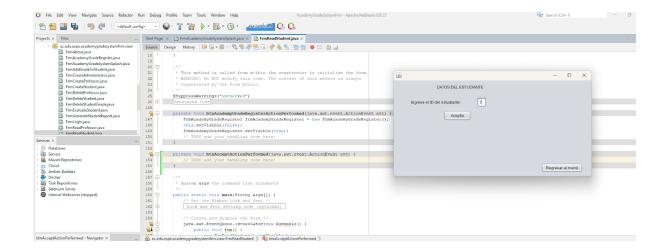

```
public class CreateProfessorController {

public class FrmCreateProfessor extends javax.swing.JFrame {
```

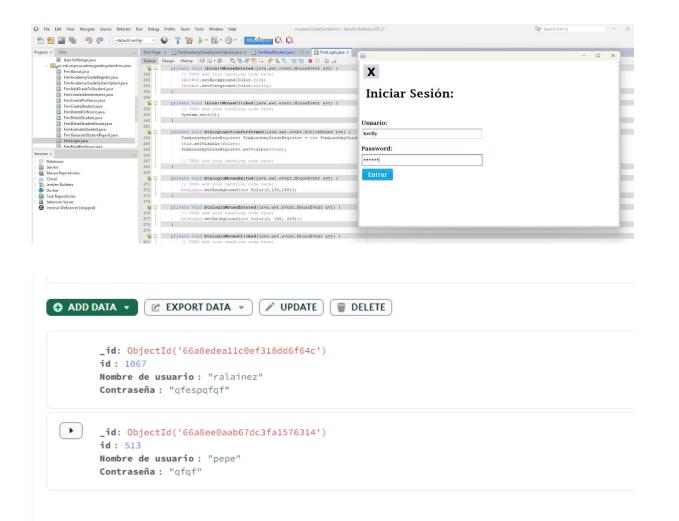

```
missing functionality for reading professor(-1)
```

Missing functionality for reading (-1)

```
public class FrmReadProfessor extends javax.swing.JFrame {
 public class UpdateProfessorController {
public class FrmUpdateProfessor extends javax.swing.JFrame {
 public class DeleteProfessorController {
public class FrmDeleteProfessor extends javax.swing.JFrame {
missing functionality for create student(-1)
public class FrmCreateStudent extends javax.swing.JFrame {
private void calcularPromedio() {
```

 Login (password is encrypted)
 10/10 (password is encrypted before or after reading): 12:07

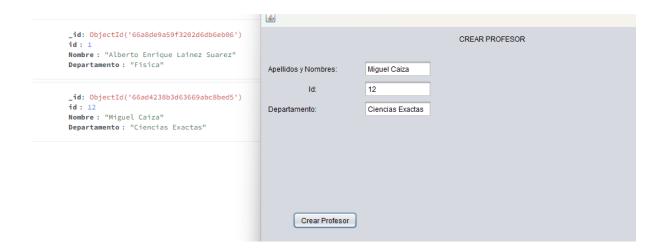

```
60 E
         private static String encryptPassword(String password) {
              StringBuilder encrypted = new StringBuilder();
61
62
              for (char c : password.toCharArray()) {
63
                 encrypted.append((char) (c + 1));
64
65
             return encrypted.toString();
66
67
